

# AGRI 1301: Agribusiness Internship

The track in agricultural economics is intended to augment basic education in the science and technology of agricultural and marine sciences with fundamentals of economics and business. Fundamental knowledge of economic and business principles is essential for a graduate to be effective in any private sector enterprise involving the production, processing, transport, and marketing of the products of the land and the sea. Knowledge of economic principles is also essential for public sector employment involving planning and natural resource conservation, management and policy. The agricultural economics major emphasizes coursework in fundamental principles of business and economics. Specialized courses apply these principles to production, marketing, management, and agricultural, food, and natural resource policy. The internship is intended to expose the student to real world economic and business situations involving agricultural and marine products.
