

AQCL 2201: Aquaponics

This course will introduce students to the various aquaponic food production systems, and farming in soil-less conditions. It covers the theoretical basis of aquaponics, the nitrification process and the function of bacteria in the system. The laboratory component includes the building of a small scale aquaponic unit.

Credits: 4

Class Hours: 6

Prerequisites:

MASC 1102

Department: Aquaculture
