

Agri-Business

A degree in Agribusiness prepares students for careers in the nation's growing agribusiness sector which provides products and services for the production, processing, and distribution of food. The agribusiness program combines Core Business courses with coursework emphasizing the needs of agribusiness firms. Students integrate business management principles with technical knowledge to develop practical decision-making skills. The program allows graduates to find employment in non-agricultural firms as well as with traditional agribusiness companies.

Department: [Agribusiness](#)

Type: Associate of Science

Programme Outline

Year I: Semester I
