

AGRI 2202: Introduction to Crop and Livestock Health and Food Safety

In this course, students will be introduced to basic microbiology and the importance of microorganisms to food and agriculture. Along with this, concepts such as what a 'pest' is, and the nature of pest damage will also be explored. Students will also be taught how to relate the biology and ecology of various organisms to their pest status, and apprised of those techniques that are appropriate for the management of major pests affecting crop and livestock health

Credits: 3

Prerequisites:

2nd Year Standing

Department: Agriculture
