

# ECOL 1201: Fundamentals of Ecology

Ecology describes the flow of energy, cycling of bio-geochemical materials and succession of natural systems. It shows the interrelationship between biotic and abiotic environmental components and how ecosystems work. The importance of balance in an ecological system is paramount. This course will show how human activity can affect the delicate balance of an ecosystem.

**Credits:** 4

**Class Hours:** 5

**Department:** Art and Environmental Science
